

# *Thank you for your order!*

You have bought hole punch / revolver pliers.

Hole pliers, also called revolver pliers, are super handy pliers for making holes in paper, cardboard, plastic, leather, latex, rubber, etc.

The tubes are made of metal and have a sharp edge.

How do you use piercing pliers?

- Place the material in the hole punch.
- Possibly a piece of leather on the metal plate to protect the tube.
- Press the pliers.
- And now **turn** the pliers back and forth!
- Only now will the pliers cut and there will be a hole in it.

Many users only compress the pliers, but then usually nothing to little happens. Only when you start turning the pliers will cut and there will be a nice hole in it.

Compare it with an ordinary knife.

If you only press a knife on material but do not move / cut back and forth, nothing will happen.

We hope you enjoy using the pliers!

Sincerely,

Amber
